# LTC Public Works & Permits

There are about 400,000 public works annually in the Netherlands in which municipalities frequently encounter a number of problems. It is a task of the municipalities to channel the collaboration with all parties involved. For example, it is important that all work activities are reported, that there is no damage to public space, and that there is an overview of all public works. LTC Public Works & Permits assists in the whole process – from the execution up to the administrative handling and inspection. The result is good coordination and a pleasant environment for residents, road construction companies and municipalities.

## HOW DOES IT WORK?

A large number of work activities to the underground infrastructure are executed daily. The result of this can be the lack of reporting, traffic nuisance or damage to the site. LTC Public Works & Permits automates the process from approval request up to invoicing and creates an overview of new, ongoing and completed work activities. In addition to efficient administrative handling, this also results in better management. All the relevant data related to the work activities are registered so that it can be consulted at any time. Because municipalities and industry professionals use the same platform, ambiguities and possible discussions are avoided.

## NICE FOR ALL PARTIES INVOLVED!

For companies, LTC Public Works & Permits simplifies the reporting of work activities and the application of a permit, even when working in joint ventures. Companies are in direct contact with the municipality so that the communication is quick and smooth. The municipality gets to manage all work activities and are in control of the total workflow.
